In view of the Appeal Brief filed on December 18, 2006, PROSECUTION IS HEREBY REOPENED. New ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

A handwritten signature in black ink, appearing to read "Frank G. Font". The signature is stylized with a cursive script.

DETAILED ACTION

In view of applicant's arguments in the Appeal Brief filed on December 18, 2006, examiner agrees with applicant's arguments. Thereby, claims 1 is now allowable over the prior art, hence the depending claims 2-7 are also allowed by virtue of dependency. However, in light of the prior art of Stone et al. (US 5,692,077), the currently pending method claims 8-10 are not allowable.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Stone et al. (US 5,692,077).

Stone discloses in Fig. 8 and structure which provides an optical system comprising at least one switchable volume diffraction grating and a static grating (diffractive microlens array); providing an input beam into said system, enabling the switchable volume diffraction grating to diffract with a predetermined diffraction efficiency (the voltage sources C1-C4), wherein the at least one switchable volume diffraction grating constitutes a set of switchable volume diffraction gratings.
